Headset Pairing | Intercom

To pair the headsets, press the arrow key on each headset for about 5 seconds to activate intercom pairing mode. You will hear several beeps and then the voice message "Intercom Pairing". Additionally, the red LED will flash rapidly. Once both 2Talk headsets are in pairing mode, just tap the arrow button on either headset to connect. You will hear the other party, and the blue LED will double flash in a heartbeat pattern while connected.

To go into standby mode (still paired but conversation interupted), either headset user can tap the arrow key once. In standby mode the blue LED flashes slowly. Either headset can tap the arrow key again to reconnect.

Tap   Tapping the center button once completes the pairing.

End | Intercom

Tap   Tapping the center button ends the intercom connection and puts you in standby mode. The headsets are still paired. Tapping it again reconnects you.

Troubleshooting

Factory Reset

If you want to restore the headset to factory default settings, use the **Factory Reset** in the configuration menu. The headset automatically restores the default settings and turns off.

Fault Reset

If the headset is not working properly for any reason, push the **pin-hole reset button** located below the **Center Button**.

1. Rotate the speaker pad of the left headset counterclockwise to detach it.

2. Insert a paper clip into the reset pin-hole and press the reset button for a second using light pressure. **Fault Reset** will not restore the headset to the factory default settings.
