

OMNIA SILICON MOULD

TAILORED TO FIT THE OMNIA OVEN

Made from BPA-free silicone, the Omnia silicone mould meets both FDA (US Food and Drug Administration) and LFGB (Europe Lebensmittel- und Futtermittelgesetzbuch) requirements.

USE

Before using the silicone mould for the first time, wash it in warm water with washing-up liquid. Dry thoroughly. Grease the inside with oil or cooking fat to enhance the mould's natural non-stick properties.

We recommend that you continue to wash the mould using washing-up liquid prior to every use in order to enhance its non-stick properties.

Place the silicon mould in the Omnia aluminium food container then add your ingredients.

- May be used separately in microwave ovens
- Can be cleaned in dishwashers
- Can withstand freezing
- Avoid sharp implements, scouring pads, etc.
- Wash and dry after use

Warning: Both the silicone mould and the Omnia oven become extremely hot. Be careful and always use oven gloves or similar. Follow Omnia's instructions for handling all products.

NOTE: Temperature range: -30°C to $+260^{\circ}\text{C}$ / -22°F to $+500^{\circ}\text{F}$. At excessive temperatures, the silicon mould can suffer damage. Keep away from open flames; must not be placed under the grill. On cookers, use only inside the Omnia food container.

NOTE  **MAXIMUM TEMPERATURE**
 $+260^{\circ}\text{C}/500^{\circ}\text{F}$
MINIMUM TEMPERATURE
 $-30^{\circ}\text{C}/-22^{\circ}\text{F}$
